## Image editor for android phones

Source: Joe Maring/ Android Central Best Android One Phones Android Central 2021 The best Android One phones get the latest Android updates simultaneously with Google Pixels. With guaranteed software updates and security patches, as well as a clean interface without bloatware, they offer quite significant benefits. There are a lot of great Android One phones out there, but if you ask us, Nokia 7.2 is the best you can get. Source: Joe Maring/ Android Central Of all Android One phones that you can buy in the U.S., we need to be a Nokia 7.2. The Nokia brand, led by HMD Global, has kicked out a lot of great smartphones in the last couple of years, and for the North American market 7.2 stands out as an incredibly strong offering. Nokia phones have a legacy for the well-built, and that point holds 100% true with 7.2. It has a durable aluminum frame with a stylish glass wall that looks and feels incredible. In front, the 6.3-inch screen is a pleasure to watch. In addition to being sharp at 2220x1080 resolution, its ability to play HDR10 content and convert SDR videos to HDR videos means that everything is full of color and liveness all the time. What else helps Nokia 7.2 stand out? Its battery life is fantastic, the NFC chip allows contactless payments with Google Pay, USB-C is used for charging, and you can extend the generous 128GB basic storage up to 400GB if you plan to store a bunch of local files. There aren't many downsides to Nokia 7.2, but we note that triple rear cameras are simply OK and that the lower frame below the screen is on the big side of things. Otherwise, this is starboard. Premium glass builds HDR10 screen Large battery 128GB expandable storage with 3.5mm headphone jack Large sub frame Rear cameras are great The best Android One phone you can buy If you live in the US and need a good, reliable phone that doesn't break the bank, it's hard to do much better than the Nokia 7.2. Source: Android Central One step below Nokia 7.2, we have a Nokia 6.2. 6.2 is not as technically impressive as its more expensive sibling, but there is no doubt how good a value proposition it brings to the table. Nokia 6.2 is basically the same body as the Nokia 7.2 with slightly discounted data. It has the same 6.3-inch Full HD+ display, as well as support for playing native HDR content and converting SDR videos to HDR videos. You'll also get the same 3,500mAh battery, triple rear cameras, 4GB of RAM, and NFC for Google Pay. 6.2 has a different processor than 7.2, less internal storage and a 16-megapixel primary camera instead of 48 megapixels, but for the most part it's a similar experience. Given the large price difference between the two, 6.2 will become much more convincing. Excellent hardware HDR display Three rear cameras Large 3,500 mAh battery Google Pay support Average processor quality is OK Why don't you save money? Basically a discounted version of nokia 7.2, 6.2 offers one of the best values that Android One offers. Source: Harish Jonnalagadda/ Android Central There is no doubt that Nokia 7.2 and 6.2 are fantastic phones, but at the same time we also understand that they may still cost too much for some people. If you want to keep your budget even lower, our most popular recommendation goes to Nokia 4.2. Nokia 4.2 is of serious value. It has a 5.7-inch screen with a small water drop door, face lock and metal + glass design that looks and feels as good as phones that cost hundreds of dollars more. Speaking of design, Nokia 4.2 has an unexpected flair of glamour that we're digging for. To prompt the Google Assistant, there is a button and an LED notification light that wraps around the power button. It's cool, isn't it? The specifications, Nokia 4.2 also includes a capable Snapdragon 439 chipset, 32GB of expandable storage (up to 400GB), fingerprint scanner and NFC for Google Pay. The screen isn't the sharpest with just 720p HD and the older Micro USB charging port is annoying, but it's hard to complain too much about the price. Durable, flashy design Google Assistant button Notification light Waterdrop nifty NFC chip for Google Pay Dual rear cameras 720p screen resolution 32GB internal storage Micro-USB Spend even less Nokia 4.2 is a budget phone that's done right. It is well built, has great specifications and excellent software at budget price. Source: Apoorva Bhardwaj / The newest entrant in Android Central HMD Global's portfolio has a lot to offer. Powered by the familiar Snapdragon 665 chipset, the Nokia 5.3 has 4GB of RAM and 64GB of internal storage, making it decent enough to make your phone available for everyday use. The phone is ready for Android 11, which means that it is one of the first to get a stable update. There is also a 13MP camera and 5MP wide-angle lens on the back, as well as a 2MP macro and a 2MP portrait lens. However, the standout feature of nokia 5.3 is battery life. Under the hood is a 4,000 mAh battery and an energy-efficient chipset, so you get two days of battery life. The phone has a massive 6.55-inch screen, but the resolution itself is 720p. It's not too bad as the screen feels great in daily use, but a 1080p panel would have been better. Elsewhere, there is NFC for Google Pay, FM radio, 3.5mm headphone headphone service, Wi-Fi ac and Bluetooth 4.2. Two-day battery life Exciting colors with minimalist design 3.5mm headphone jack Large screen Outdated chipset Only the 720p display Only the basics nokia 5.3 offers familiar devices on a sturdy platform supported by excellent battery life and clean software. Source: Motorola The first Motorola One was a reliable Android One device that did the basics well, but in terms of design, it wasn't very exciting. With One Vision, Motorola retains its focus that it gives you a no-nonsense handset Can do everything you ask when you have a little pizzazz. Undoubtedly, the most striking part of One Vision is its 21:9 display. This is much narrower and longer than most phones, giving it a much more cinematic experience when watching movies or playing games. It also looks great in resolution 2520x1080. One Vision's Android One software experience is as clean as ever, but you'll also get some of Motorola's excellent custom additions, such as Moto Display, twisting your phone twice to unlock the camera and more. Specs, you will also benefit from a 48 megapixel (MP) rear camera, USB-C for charging and 128GB of built-in storage, which can be extended further up to 512GB. But there's a small catch. Although you can buy Motorola One Vision in the UNITED States, it is not officially sold here. This means two things — 1) It works in AT&T and T-Mobile, but your LTE connections may not be as strong in rural or congested buildings. 2) There is no warranty on the phone. Super narrow 21:9 display Motorola's excellent software includes a 48MP rear camera USB-C Plastic Structure Meh Cameras Does not support all U.S. LTE bands One of the most unique displays on an Android phone Equipped with a unique 21:9 display Motorola One Vision delivers Android One in a very flashy package. Source: Daniel Bader/Android Central For many people, the camera is one of the most important factors when buying a new phone. While all the phones on this list have cameras that are more than adequate to share things on Twitter and Instagram, the Nokia 9 PureView is worth a look if you want to take your photography game to the next level. Behind the Nokia 9 PureView, there are a total of five cameras, three of which are dedicated to monochrome sensors, while the other two capture color images, and manage to capture an insane amount of detail and light data with each image you take. The automatic shooting mode is great, but the actual magic happens when you shoot manually/RAW. This is a camera that requires a little more work than most other phones, but if you put in time/effort, you can capture some really stunning photos. Outside of the camera experience, nokia 9 PureView also offers a large OLED screen, stunning design and surprisingly fine haptics - which is still far too rare on most Android phones. We wish it was powered by the new Snapdragon 855 chipset rather than the older 845, and the screen fingerprint scanner could be a pain in the bush. If you can forget about these complaints, Nokia 9 PureView is a unique phone that can be worth an investment for some people. Unique five camera system Lots of manual photo controls Colorful OLED display Striking glass design Great haptic feedback Slow fingerprint scanner 2018 flagship processor usage speaker Take some of the best photos Although it's expensive, Nokia 9 PureView is the flagship Android One One which takes your photos to the next level. Source: Android Central The One Action is certainly a unique option because of the integrated action camera on its body. This makes it stand out from other options on this list, and if you take a lot of videos on the way, it can be a good choice. The camera at the back has a 117-degree wide-angle lens and seamlessly captures horizontal video, and Motorola reorients the lens position so it can do so. Elsewhere on the phone, the 6.3-inch FHD+ display is powered by Samsung's Exynos 9609 chipset. It's not the fastest phone in this segment, but it's downgraded right now, and it lasts very daily. You'll also get 4GB of RAM and 128GB of storage, microSD, NFC, FM radio and up to 3.5mm connector. The 3,500mAh battery offers a day's use with ease, but the downside here is that charging is limited to 10W. All in all, There's a lot to arrest about One Action, and the video camera in the back is a big separator. Built-in action camera Vibrant display Long-lasting battery 3.5mm headphone jack Great design Aging hardware 10W charges only The action camera and phone all-in-one With an action camera baked into your phone, Motorola One Action is a great choice if you take a lot of videos. You can't go wrong with any Android One phone on this list, but after all, Nokia 7.2 is our most popular choice. One of the phone's stand-out features is its platform, and it continues the legacy of Nokia's supportive models. Nothing in the design of nokia 7.2 makes it feel as cheap as it is. Instead, it feels like the right, much expensive flagship. Once you start using your phone and get to appreciate its stunning screen, long-lasting battery and features like NFC for Google Pay, the whole experience combines creating a truly fantastic phone that should last you for years to come. The primary reason to buy Android One is fast updates and clean software, and all devices on this list deliver in these key areas. Motorola also makes a lot of phones with clean software that aren't under the Android One initiative, so be sure to take a look at the best phones in this category for more options.
